Over the past 3 decades, mortality rates for acute myocardial infarction (MI) have declined significantly in large part due to improved evidence-based revascularization

techniques, medical therapies, and systems of care. Type 2 Myocardial Infarctionâ€™Diagnosis,

Prognosis, and ... -

Polymyositis (PM) is a type of chronic inflammation of the muscles (inflammatory myopathy) related to dermatomyositis and inclusion body myositis. Its name means "inflammation of many muscles" (poly+ myos+ -itis). The inflammation is predominantly of the endomysium in polymyositis, whereas dermatomyositis is characterized by primarily perimysial inflammation.
