Therapeutic peptides: Historical perspectives, current development trends, and future directions

Therapeutic peptides: Historical perspectives, current ... - The

tetratricopeptide repeat (TPR) is a structural motif. It consists of a degenerate 34 amino acid sequence motif identified in a wide variety of proteins. It is found in tandem arrays of 3-16 motifs, which form scaffolds to mediate protein-protein

interactions and often the assembly of multiprotein complexes. These

alpha-helix pair repeats usually fold together to produce a single, linear ...
